 if little has written a charming account of her vacation, ~~which~~
 all friends and relatives may receive the same account, nicely
 done up as a pocket book, as a gift for the New Year. Or, more
 univously, if Professor Bartel has chased away his children from
 the playing ~~floor~~ on the system, he can ~~use~~ square the
 circle very efficiently, and in short order ~~we~~ expect that his
 solution will be in the hands of the 249 ^{mathematicians} people in the world
 who ~~believe~~ ^{know} if couldn't be done. ~~Principled~~, ~~that is,~~
~~could~~ can pay for the postage.

Actually, he has paid, or is paying for, the system, too,
 and ~~the~~ ^{money} he has somehow found, saved, purchased,
 borrowed, or speculated to the sum of \$25,000 today, \$20,000
 tomorrow, \$10,000 in a few years ~~to~~ (in constant dollar) of course.
 Remarkably, his overhead is low, for the whole system is encompassable
 in 9 m². Most of it is portable, if he wishes to carry it to the seashore in
 his car. He can also buy a little machine, the size of a ~~table~~ ^{wallet}, which
 he can use to transmit or collect information faster than a shot ~~to~~ ^{to} connect
 information sources and fancy printing machines. One can write in
