

Dear Dr. V., I would like to apologize for the delay in your reply.
I have already written to you about the arrival
of your book on Earth in upheaval. I took it with me to the States
where I found time to read a work before going
again to further research a subject of research in Syria
(Ras Shamra) & Cyprus (Arch.).
I am glad to
with the greatest interest a much profit. I am glad to
have learned that the upheavals in geological times thought
so far from our historical & prehistoric as prehistoric
times, that in some cases seems to have been much
earlier to us. So the parallelism between them & the
cases I found interesting, the historical development
in the Near East ^{and} ~~and~~ ^{which} become much more significantly.
Since the publication of that Comp. in 1948 at the
beginning ^{mainly} of my wartime duties in the Free
French Navy (between 1943 & 46), further study & research
~~on the part~~ ^{of} of the near eastern arch. sites have
brought me forward more confirmation of the reality
of these events on continental scale which I had
detected & tried to analyze. I would be happy to write
immediately the second & enlarged edition of that
Comp. to include these new ~~and~~ confirmations.
They will ultimately allow to better explain the history
development & mechanism & take out of the hands
of men the command of ~~the~~ historical happenings
which he thought to possess. - Having established those
successive crises during the II - III mil. of the Near East
(& there are others to be analyzed of the IV & V mil.), I was
tempted to look for the causes among which earthquakes,
climate changes & other natural catastrophic agents.
~~have evidently contributed to prehistoric~~
The idea of the earthquakes disturbance is so much the
imagination of the archaeol. that some of them ^{thought} ~~believe~~
that I wanted to explain all these crises by earth tremors
& their consequences. Thus most of my colleagues who
are not easily accessible to new ideas used this argument
to try to discredit the whole idea of continental size
crisis, for this idea disturbed their rather conservative
outlook on the history of events during the II & III mil.

It will take some time ^{perhaps} to sink in 20 years
that the new order will take root. But Donald likes
to hasten the process by publishing the 2nd ed. of
his Comp. with new material a new conformal
~~part~~ in order to help the historical book to
prevail. He ~~says~~ Unfortunately I am so burdened
with work that the time ^{has} not yet come that I can
sit back to write down the new ~~old~~ Comp. —

Perhaps it is good, at present, to establish
only those costs a lesson the explanation of the
causes to later research. For ^{the} historian & the general
people are not yet ready to believe that the world
is a much less safer place than they were
accustomed to believe. — They ~~try~~ always try to
consider history as a succession of wars &
activities of conquerors, so as to ~~hope~~ have the
assurance that with the removal of ~~the~~ such
troublesome warlords, eternal peace or ~~a~~ certainly
on earth. — Very recent earth quakes disaster
in the usual ^{way} ~~way~~ agree with this theory
happen, have again shaken this belief. But men
are not easily to convince to face realities & to
~~not~~ accept the result of objective research. They prefer
to live in their imaginative world. — The following
points have particularly struck me when reading your book.

I will try to get the publ. info. to do T. in Alaska & the
Fiji Islands which are so important also for our book
releatli. firs & their chronol. Then before the war a book by
Pitmeuler (?) on the unmonopolized, — Liberia but very
by Society of my house during the war by general officers etc.
the most of my library has been destroyed a few records were (p. 13)
book more but of great. — Your inf. to Lemoine were very
are very good. — In some case, you shall be in
point? I know that there was no war or conflict
have occurred in the IV - III & II th mill (at least 7th too) but
not explain the other factors. — But you

3 explanations or proposals we will help me to try again to find out the real causes. - You show very clearly the weakness of the researches of the river lots, based on Darwin. They start from a preconceived idea a try to fit the results of their research into their scheme. We have to start from the ~~concrete~~ result of our investigation & then, when sufficient observations are collected, we should continuously try to find out the system & if there is a system & a link in the causes & effects. We should never wish our this or such ideas to prevail, we are the servants of truth not the masters.

P. 28. I myself dug hippotomus pits in the Rhine valley during my earliest researches. Above all after my ^{first} discoveries of the effects of climatic change in the abrah ^{time} period (Bronze Age = Hall. B.C.) I published them in a work which I hope to send you when back in St. Leon. - In 1949-52 in

Luxembourg (Ypres) I discovered evidence of a Klimawandel which inundated the whole stretch a part of the capital city of Luxembourg (the Alzette of the Tell Durance River (time of Atheneum, new Kingdom of E.). I shall send you a copy of this book. This Klimawandel is contemporary with widespread waves of upheavals in prehistoric Europe ~~not at~~ the beginning of the Iron Age, ca 1100 or 1000 B.C. according to the present chronology. - P. 77: Coen fig. Those excavated in abrah Coen who many neolithic tombs & settlements (published between 1923 & 29) I try to send you offprints. But I never thought this Coen formula may be used with these next figs. The idea is possible. There would be good possibility for research in Alsace for this section. You should come over here & have a look in the gash. In general I could say, as you have so much written now on the results of other research would a better than so well, you should now yourself take a hand in further research & undertake yourself some concrete Johnson's & Shrigley's research. I would

Gladly see you all support a reply in my paper.
 There are many possibilities when you will increase your
 knowledge & verify your conclusion by going to the site
 & see the truth by yourself. Your ~~advice~~ over
 feeling of security for the conclusions to be taken
 from the other researchers work would be useful.
 Also the critical approach is helped by investigating
 on the spot, which now with the quick transportation
 means (by air) to all part of the world, is much
 easier than before. Taking the extent of your
 knowledge & feel you ^{would} help us by basic research
 to get more light on the so many & so pertinent
 problems. — P. 95: when I return to Syria, I shall
 try one day to see some of the horrors you refer to which
 must be very convincing evidence. — P. 102, bottom of the
 Atlantic, have you noticed the new volcanoes which
 is forming near the so badly shaken Island of
 Santorini at or the archipelago, taking this
 month. Then, under our eyes, on a smaller scale
 is happening what happened, earlier this, on a broader
 scale. So there's how the things occur by you.
 I am returning in Sept. to Cyprus, where also recent
 earthquake disturbances have taken place. — P. 104.
 Pefferson's research have also disclosed cyclic
 periods of destruction by climatic changes which
 explain the gothic XIII-XIV^{c.} different in Europe.
 See there too in confirmation of your idea they
 had come & upheaved countries with very recent
 catastrophes. — I per the way chapter of your
 geol. & astronomical argument what I feel coming
 but cannot personally confirm being unfamiliar
 with the matter.

It will take some time ^{perhaps} ~~as much~~ is a 20 years
that the new order will take root. But Donald like
to hasten the process by publishing the 2nd ed. of
his Comp. with new material a new conformal
~~part~~ in order to help the historical book to
prevail. ~~so~~ Unfortunately I am so burdened
with work that the time ^{has} not yet come that I can
sit back to write down the new ~~that~~ Comp. —

Perhaps it is good, at present, to establish
only those costs a lesson the explanation of the
causes to later research. For ^{the} historian & the general
people are not yet ready to believe that the earth
is a much less safer place than they were
accustomed to believe. — They ^{try} always try to
consider history as a succession of wars &
activities of conquerors, so as to ~~hope~~ have the
assurance that with the removal of ~~the~~ such
troublesome warlords, eternal peace or ^a certainly
on earth. — Very recent earth quakes disaster
in the usual ^{way} ~~way~~ agree with this theory
happen, have again shaken this belief. But men
are not easily to convince to face realities & to
~~not~~ accept the result of objective research. They prefer
to live in their imaginative world. — The following
points have particularly struck me when reading your book.

I will try to get the publ. info. to do T. in Alaska & the
Fiji Islands which are so important also for our book
releatli. firs & their chronol. Then before the war a book by
Pitmeuler (?) on the unmonopolized, — Liberia but very
by Society of my house during the war by general officers etc.
the most of my library has been destroyed a few records still remain (p. 13)
book now lost of mine. — Your inf. to Lemoine were very
are very good. — In some case, you shall be in
point? I know that there was no war or calamity
have occurred in the IV - V - VI & VII mill (at least 7 & 8 too) but
I did not explain the other fields. — But you
